Distribution

Salary Cost Distribution & SAP B1 Journal Preparation

User Guide — step by step, from setup to the journal entries

Odoo 17 Enterprise · Module: salary_distribution · Version 17.0.1.4.0

Perfect Business Solution Services (Pvt) Ltd

October 2026

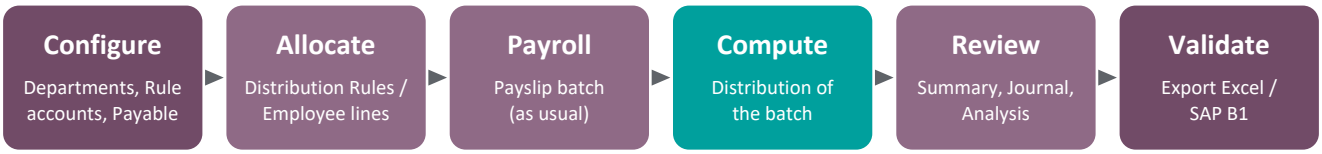

1. What the module does

Some employees work for the whole company — drivers, cleaners, office assistants — but their salary is paid by one department. **Distribution** shares the cost of their salary with the departments they serve, salary rule by salary rule (Basic Salary, COL Allowance, Travelling, deductions …), and prepares the accounting journal entries in the exact layout used for **SAP Business One**.

- Define **who shares the cost**: reusable **Distribution Rules** (e.g. *Drivers: IT and Cloud 10%, Development 20%*) and/or employee specific department lines. The rest stays with the employee's own department.
- Select a **payslip batch** and click **Compute**: every payslip line is split by department.
- Review the **summary** (salary rule × department), the **re-allocation flow** and one balanced **journal entry per salary rule** with GL Account Code, SYS Code, Project and SBU.
- **Validate** and **export to Excel**. The data is ready for the SAP B1 integration.

IMPORTANT — No journal entry is created in Odoo
The module only prepares the entries. Accounting is posted in SAP B1, which is why every line carries the SAP **SYS Code** (e.g. `_SYS00000002427`).

The process at a glance

Key terms

Term	Meaning
Include in Distribution	Checkbox on each salary rule, ticked by default. Only ticked rules are distributed and get a journal entry. Untick it for Gross, Net, EPF, ETF …
Distribution Type	Set on each salary rule. **Earning**: debit the departments, credit the payable. **Deduction**: debit the payable, credit the departments. **Automatic** decides from the rule category (Basic / Allowance = earning, Deduction = deduction, other categories are skipped).
GL Account Code	Account number, e.g. `601110` Basic Salary.
SYS Code	SAP B1 internal account code, e.g. `_SYS00000002427`. Required for SAP.
Department Exception	A department that uses another account for one salary rule, e.g. the PBSS SMB recharge on `105618`.
Entry Name	Name of each department journal line: **department + salary rule**, e.g. *PBSS SMB Basic Salary*. Built automatically so every line is easy to identify in SAP B1.
Project / SBU	Codes of the department sent with each journal line, e.g. ADMIN / 0010.
Distribution Rule	Reusable list of Department + Percentage, attached to many employees.
Own department share	100% minus everything distributed. Always charged to the employee's department.

2. One-time setup

Do these steps once. After that, every month only needs steps 7 to 10.

1 Install or upgrade the module

Menu: **Apps**

1. Make sure the folder `server/odoo/custom` is in the `addons_path` of `odoo.conf`, then restart the Odoo service.
2. Open **Apps**, click **Update Apps List**, search **Distribution** and click **Install** (or **Upgrade** if it is already installed).
3. The **Distribution** app appears on the home screen. It is visible to **Payroll** officers and administrators.

2 Department codes

Menu: **Distribution › Configuration › Department Codes**

For every department, set the **Project** and **SBU** that SAP expects. Drag the lines with the handle to set the order of the journal lines (ADMIN first, then CLINF, PCSUP …).

Department	Project	SBU
Administration	ADMIN	0010
Cloud Infrastructure	CLINF	0008
Support	PCSUP	0007
ERP Business	BSERP	0002
Sales	SALES	0001
Maldives	MALEX	0009
PBSS SMB	ADMIN	0010

> **TIP — Sister company recharges**
> To charge part of a salary to PBSS SMB, Perfect Leisure or Perfect Business Academy, create a department for it (Project ADMIN, SBU 0010). Its account is set in step 3 as a department exception, and employees send a percentage to it in step 5.

3 Salary rule accounts

Menu: **Distribution › Configuration › Salary Rule Accounts**

The list shows every salary rule grouped by structure. For each rule fill in:

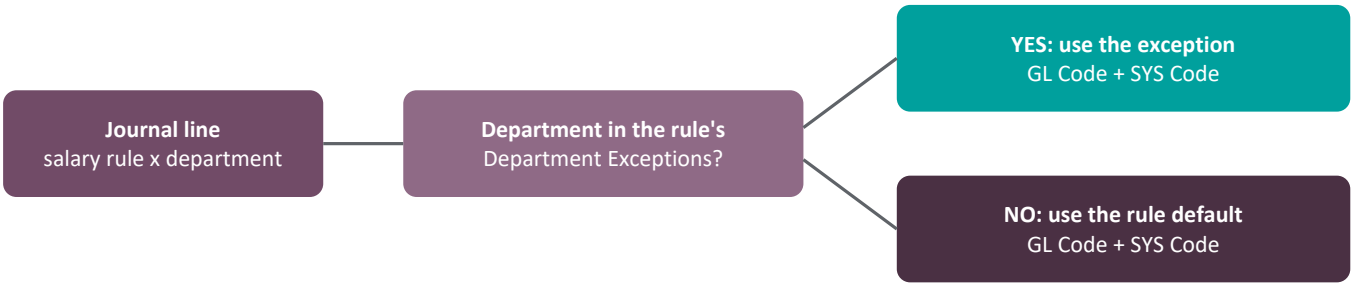

- **Include** — ticked by default. **Untick** every salary rule that must not be distributed (Gross, Net, EPF, ETF, Total Deductions …); it is then ignored completely.
- **Distribution Type** — keep *Automatic* or force Earning / Deduction.
- **GL Account Code** and **SYS Code** — the default account used by **all departments**.

Salary Rule	Include	Distribution Type	GL Account Code	SYS Code
Basic Salary	Yes	Earning	601110	_SYS00000002427
COL Allowance	Yes	Earning	601115	_SYS00000002432
Travelling Allowance	Yes	Earning	601117	_SYS00000002434
Vehicle Rent	Yes	Earning	601119	_SYS00000002436
No Pay	Yes	Deduction	601111	_SYS00000002428
Gross / Net / EPF / ETF	**No**	–	–	–

Department Exceptions. Click the open button at the end of a line (or open the rule from Payroll) and use the **Distribution** tab. Add a line only for a department that uses **another account for this rule**:

Department	SYS Code	GL Account Code
PBSS SMB	_SYS00000002295	105618
Perfect Leisure	_SYS00000002289	105612
Perfect Business Academy	_SYS00000002293	105616

How the account of a journal line is chosen:

TIP — Entry Name = Department + Salary Rule
Every department line is named automatically, e.g. *Administration Basic Salary*, *Cloud Infrastructure Basic Salary*, *PBSS SMB Basic Salary*. There is no name to type on the rule or on the exception; only the payable line keeps its own name (e.g. Staff Salary Payable).

NOTE — Sister companies use the same account for every rule
Add the exception on each distributed salary rule (Basic Salary, COL, Travelling …), exactly like the accounting sheet where 105618 appears in every section.

4 Payable accounts

Menu: **Distribution › Configuration › Payable Accounts**

Each salary structure has its own payable account, used for the balancing line of every entry.

Salary Structure	GL Account Code	SYS Code	Payable Name	Project	SBU
PBSS Salary Structure	205410	_SYS00000002354	Staff Salary Payable	ADMIN	0010
PBSS Allowance Structure	205412	_SYS00000002356	Staff Other Payable	ADMIN	0010

5 Distribution Rules

Menu: **Distribution › Distribution Rules**

A rule is a reusable split. Create one per group of employees sharing the same distribution.

1. Click **New** and enter the **Rule Name**, e.g. *Drivers*.
2. In **Departments**, add the **Distribution Department** and the **Percentage** of each line, e.g. IT and Cloud 10%, Development 20%. The form shows the share remaining on the own department (70%).
3. In **Employees**, click **Add** and select the employees who follow the rule.

> **TIP — Same link from both sides**
> Adding an employee here or adding the rule tag on the employee form is the same thing.

6 Employee setup

Menu: **Employees › (employee) › Salary Distribution tab**

- **Distribution Rules**: tags — select one or more rules. Their department lines are listed below.
- **Employee Specific Departments**: extra Department + Percentage lines for this employee only.
- Rules and specific lines are **added together**; the remainder stays on the employee's own department.

> **IMPORTANT — Maximum 100%**
> The total of all rules plus the specific lines can never exceed 100%. Odoo refuses the change with a message such as *"The total salary distribution of Driver B is 110%, it cannot exceed 100%."* A department can also be used only once per rule and once in the employee specific lines.

3. Every month

7 Run the payroll as usual

Menu: **Payroll › Payslips › Batches**

Create the payslip batch (e.g. *Net Salary Payment – Aug 2026*) and compute the payslips. Rejected payslips are ignored by the distribution. The allowance batch is distributed separately.

8 Create and compute the distribution

Menu: **Distribution › Distributions › New**

1. Select the **Payslip Batch**. The **Name** is proposed automatically and can be changed.
2. Click **Compute**. For every payslip line of a distributed rule, each department receives its percentage; the remainder (which also absorbs rounding) goes to the employee's department.
3. Allocations are read at compute time. After changing a rule or an employee, click **Recompute**.

9 Review the result

Tab / button	What you see
Summary	Key figures (employees, departments, earnings, deductions, re-allocated), the salary rule × department table with totals and net cost, and the **Re-allocation Flow** (e.g. Drivers → IT and Cloud).
Journal Entries	One entry per salary rule: GL Account Code, SYS Code, Entry Name, Debit, Credit, Project, SBU and the status *Balanced* or *Missing Account Code*. Lines without a code are shown in red.
Employee Details	Each employee, rule and department with the percentage, amount and the source (rule, specific line or own department).
Analysis button	Pivot and graph: salary rules × departments, filter and group by employee, distribution rule, period …
Journal Lines button	All journal lines in a list, grouped by salary rule.

10 Validate and export

1. Click **Validate**. Validation is refused while a line has no GL Account Code or SYS Code; the message lists each salary rule / department to complete. Fix the configuration, then **Recompute**.
2. Click **Export Excel**: sheet *Journal Entries* (same layout as the accounting sheet), *Summary* and *Details*.
3. A validated distribution is locked. Use **Reset to Draft** to change it.

4. Worked example

A driver in the **Administration** department earns a Basic Salary of **100,000**. The driver follows the rule *Drivers*: Cloud Infrastructure 10%, PBSS SMB 20%.

Distribution of the driver's Basic Salary

Department	Source	Share	Amount
Cloud Infrastructure	Rule Drivers	10%	10,000.00
PBSS SMB	Rule Drivers	20%	20,000.00
Administration	Own department	70%	70,000.00
Total		**100%**	**100,000.00**

Journal entry "Basic Salary August 2026" (with a sales employee earning 50,000)

GL Code	SYS Code	Entry Name	Debit	Credit	Project	SBU
601110	_SYS00000002427	Administration Basic Salary	70,000.00		ADMIN	0010
601110	_SYS00000002427	Cloud Infrastructure Basic Salary	10,000.00		CLINF	0008
601110	_SYS00000002427	Sales Basic Salary	50,000.00		SALES	0001
105618	_SYS00000002295	PBSS SMB Basic Salary	20,000.00		ADMIN	0010
205410	_SYS00000002354	Staff Salary Payable		150,000.00	ADMIN	0010
		Total	**150,000.00**	**150,000.00**		

The PBSS SMB line uses the department exception of the rule (105618); the other departments use the rule's default account (601110). Each department line is named **department + salary rule**. For a **deduction** rule (e.g. No Pay) the sides are reversed: the payable is debited and the departments are credited.

NOTE — Before going live
Check every SYS Code against SAP B1 once — one validated distribution exported to Excel is the easiest way to compare with the current accounting sheet.

5. Messages and troubleshooting

Message / situation	What to do
The total salary distribution of X is 110%, it cannot exceed 100%.	Lower a percentage, remove a rule tag or a specific line of the employee.
The department IT is added more than once …	Keep one line per department with the total percentage.
A department is added more than once in the department exceptions of …	Each department can have only one exception per salary rule.
Some journal lines have no GL Account Code or SYS Code	Complete the rule default account, its department exception or the payable account of the structure, then click Recompute.
The batch has no payslips to distribute.	Compute the payslips of the batch first.
A rule is missing from the journal	Include in Distribution is unticked on the rule, it is Automatic on a Gross/Net category, or its amount is zero.
Amounts went to the wrong department	Check the employee's department and the Salary Distribution tab, then Recompute.

Menu reference

Menu	Purpose
Distribution › Distributions	Monthly distributions: compute, review, validate, export.
Distribution › Analysis	Pivot / graph of all distributed amounts.
Distribution › Distribution Rules	Reusable department splits and their employees.
Distribution › Employee Allocations	All employee specific lines in one list.
Distribution › Configuration › Salary Rule Accounts	Include, Distribution Type, GL Code, SYS Code and department exceptions per rule.
Distribution › Configuration › Department Codes	Project, SBU and journal order.
Distribution › Configuration › Payable Accounts	Payable account per salary structure.

Preparing the SAP B1 integration

Each validated journal line already holds what a SAP B1 journal entry line needs:

Distribution field	Intended SAP B1 use
SYS Code	Account of the journal line (`AccountCode`)
Debit / Credit	Line debit / credit amount
Entry Name (e.g. PBSS SMB Basic Salary)	Line memo, identifies the department line
Remarks (e.g. Basic Salary August 2026)	Journal entry memo
Project	Project code of the line
SBU	Cost centre / dimension (to confirm with the SAP configuration)
